Firewall migration policy

General rules

- Follow vendor communication regarding EoL announcements for your security hardware.

- Plan migrations in advance. The most used and recommended path is to migrate your appliance to a new generation model of the same series.

What if the vendor does not continue your series?

- You should then consider choosing a model form a different series, with parameters similar to your old equipment (as long as those parameters were sufficient).

- If your network has specific requirements, it makes sense to consult your options with an integrator. You'll be able not only to choose several alternative models, but also test how they work in your environment.

Which parameters should you take into account?

- firewall throughput

- number of interfaces

- IPS throughput

- High Availability modes

- in some cases - availability and lead times

Short on **time**?
Short on **team**?
Too much on your shoulders?

We'll help you

plan and seamlessly implement migration projects of your appliances or even entire systems.
